Second Chair : Johanna Schnabel (Freie Universität Berlin)

Third Chair : Ady Patricia Carrera-Hernandez

CALL FOR PAPERS

In decentralized countries the subnational governments have become the central units for implementing and providing public policies, which has increased their responsibilities and powers. In this sense, the requirements to qualify the subnational administration and governance were expanded to respond to its new roles both at the local level and in intergovernmental relations. Considering that, the research question of the workshop is: how does decentralization affect subnational state capacities and the implementation and provision of public policies? This workshop invites research scholars to submit papers focused on this question.

The demands imposed by the new responsibilities to the subnational level as a result of decentralized public policies has induced the creation, building and/or strengthening of their state capacities. In this sense, capabilities have become a key element to build and consolidate the autonomy attributed to subnational governments within the framework of decentralizing models. Therefore, the decentralization process requires more capacities in subnational governments. However, the comparative literature on decentralization lacks a more systematic approach linking this process and its effects on subnational state capacities and public policies. This is theoretical and empirical problem still asks more research.

This analytical gap of the decentralization takes on greater relevance after the COVID-19 because subnational governments were the main sphere responsible for implementing many public policies to face the pandemic. This scenario is even more challenging when the problems require high levels of multilevel governance as was the case with the COVID-19 pandemic. The complexity and novelty of this problem, considering its spillover effects, challenged countries to develop new intergovernmental policy capacities, especially the subnational units. It is also important to highlight the importance of subnational governments in the 2030 Agenda. The contributions expected from workshop participants are focused on connecting these three topics – decentralization, state capacity, and public policies. Among others, the workshop seeks to explore the following topics: (1) if the development and variance of subnational state capabilities in decentralization contexts affects the territorial equality and the performance of public policies; (2) if the design and quality of democratic governance in territories are affected by the level of development of subnational state capacities; (3) the development of subnational state capabilities in decentralization contexts is related to the quality of public administration in combating corruption, increasing own revenues and the performance of bureaucracies; (4) the development of subnational state capacities affects their role in the multilevel governance.

This workshop is open to receive papers focused on and developing theoretical, methodological and analytical models that address decentralization, state capacities, and public policies, empirical works both discussing national cases or in a comparative way. We welcome both quantitative or qualitative papers that explore different dimensions of the decentralization (administrative, financial, and political), and different dimensions of state capacity (administrative, technical, institutional, and political). The papers could address sectoral policies or even analyze decentralization in a more general way. The workshop is open to a variety of different types of papers in order to contribute to improve the knowledge on this research topic.

ABSTRACT

In decentralized countries the subnational governments have become the central units for implementing and providing public policies. The requirements to qualify the subnational administration and governance were expanded to respond to its new roles both at the local level and in intergovernmental relations. This workshop discusses how does decentralization affect subnational state capacities and the implementation and provision of public policies. The comparative literature on decentralization lacks a more systematic approach linking this process and its effects on subnational state capacities and public policies. This is

theoretical and empirical problem still asks more research.

This analytical gap of the decentralization takes on greater relevance after the COVID-19 pandemic because subnational governments were the main sphere responsible for implementing public policies. Furthermore, the complexity and novelty of this problem challenged countries to develop new intergovernmental policy capacities, especially the subnational units. It is also important to highlight the importance of subnational governments in the 2030 Agenda.

The workshop addresses these three topics – decentralization, state capacity, and public policies. There are many works that analyze decentralization and public policies, as well as a literature that analyzes state capacities and public policies. To advance scientific knowledge of the decentralization and public policies is also relevant to consider state capacity as a theoretical support. The workshop explores four hypotheses: (i) the development and variance of subnational state capacities in decentralization contexts affects the territorial equality and the performance of public policies; (ii) the design of democratic governance in territories are affected by the level of development of subnational state capacities; (iii) the development of subnational state capabilities in decentralization contexts is related to the quality of public administration in combating corruption, increasing own revenues and the performance of bureaucracies; (iv) the development of subnational state capacities affects their role in the multilevel arrangements.

T04W01 / Decentralization, state capacities and public policies: what is new to discover?

Chair : Eduardo Grin (Fundação Getulio Vargas- Brazil)

Second Chair : Johanna Schnabel (Freie Universität Berlin)

Third Chair : Ady Patricia Carrera-Hernandez

Session 1 State capacity and environmental public policies

Wednesday, June 26th 10:15 to 12:00 (AULA 14)

Discussants

Alfonso Langle (University of Guadalajara)

(Virtual) State Capacity for Integrated Water Resources Management (IWRM)

Luiz Paulo de Moraes (Universidade Federal de Viçosa)

Suely de Fátima Silveira (Universidade Federal de Viçosa)

Josué Costa (Universidade Federal de Viçosa)

Layana Silva (University of Viçosa (Brazil))
